GLOBAL HEALTHSPAN POLICY INSTITUTE

Hello,

This week we learn how blue light from electronics could accelerate aging and how a new cellular model will help understand Alzheimer's and Parkinson's. We also learn about an interesting project that has created a cancer resistant mouse that ages 25% slower.

Additionally, we hear about an exciting new competition promoting healthy longevity from the National Academy of Medicine.

Before you go, don't forget to check out the list of upcoming conferences and events in the world of aging research. You'll see events updated every week, so keep checking in!

Are you part of a health or life extension research organization? Our coalition has grown to over 90 member groups, including 25 major US organizations and 16 major international groups. We hope your organization will be next! Check below to find a link to join our coalition quickly and easily.

All this and more this week. Join us as we move forward into another exciting month of incredible opportunities in this burgeoning and revolutionary field.

GHPI Coalition Grows to Over 90 Members

The blue light from electronics could cause premature aging, study finds

We already know that blue light from our electronic devices can disrupt sleep and cause eye strain, but a new study shows that it may also affect aging

Our coalition includes 25 major US organizations and 16 major international organizations. Will yours be next?

By joining the coalition you get access to the GHPI fellows, top experts in aging research. You gain more influence over national and world events. You are invited to our pilot projects. You get access to healthspan investment funds and our ability to promote your achievements. You get news updates, and can join our weekly coordinating call that steers the future of the healthspan movement.

All Call For Volunteers For Healthier, More Productive Years of Life!

What if the US Congress took the lead funding healthspan research? Or by removing barriers to treatments to new therapeutics that can prevent diseases like cancer?

For the first time governments seem to be listening -- and you can help!

GHPI needs volunteers to engage with the public and ally nonprofit groups around the

Model of Cell Aging and Damage May Help in Understanding Parkinson's Onset

The new model clarifies how cells age and die, and offers insights into the onset of Alzheimer's and Parkinson's.
