Hello,

This week we learn why some octogenarians maintain exceptional memory, how a common blood pressure drug could lead to longevity treatment and we learn more about why our immune systems deteriorate as we age. We also learn how socially isolated, older adults can boost brain function with online chats.

Are you part of a health or life extension research organization? Our coalition has grown to over 90 member groups, including 25 major US organizations and 16 major international groups. We hope your organization will be next! Check below to find a link to join our coalition quickly and easily.

All this and more this week. Join us as we move forward into another exciting month of incredible opportunities in this burgeoning and revolutionary field.
