Hello,

This week we learn how chronic pain is linked to family relationships, how space travel mimics aging and its affect on the immune system, and how frailty is a significant predictor of post-surgical outcomes for older patients. We also learn about a surprising link between the oral health and cognitive function as we age.

Are you part of a health or life extension research organization? Our coalition has grown to over 90 member groups, including 25 major US organizations and 16 major international groups. We hope your organization will be next! Check below to find a link to join our coalition quickly and easily.

All this and more this week. Join us as we move forward into another exciting month of incredible opportunities in this burgeoning and revolutionary field.
