

Hello,

This week we learn about a new blood test that can detect over 60 difficult to diagnose medical conditions, about another test that detects Alzheimer's with greater accuracy than prior tests, and we learn how olive oil is good for the heart - but there may be a limit. We also learn how parental health before pregnancy, especially regarding alcohol abuse, can lead to accelerated aging for children later in life.

Are you part of a health or life extension research organization? Our coalition has grown to over 90 member groups, including 25 major US organizations and 16 major international groups. We hope your organization will be next! Check below to find a link to join our coalition quickly and easily.

All this and more this week. Join us as we move forward into another exciting month of incredible opportunities in this burgeoning and revolutionary field.
