Hello,

This week we learn how men with cardiovascular risk may experience cognitive decline significantly earlier than women, how popular weight loss drugs could help stave off cancers, and we get insight on whether or not patients should screen for colon cancer at younger ages. We also get a look at aging research from around the world from the NIA.

Are you part of a health or life extension research organization? Our coalition has grown to over 90 member groups, including 25 major US organizations and 16 major international groups. We hope your organization will be next! Check below to find a link to join our coalition quickly and easily.

All this and more this week. Join us as we move forward into another exciting month of incredible opportunities in this burgeoning and revolutionary field.
