Hello,

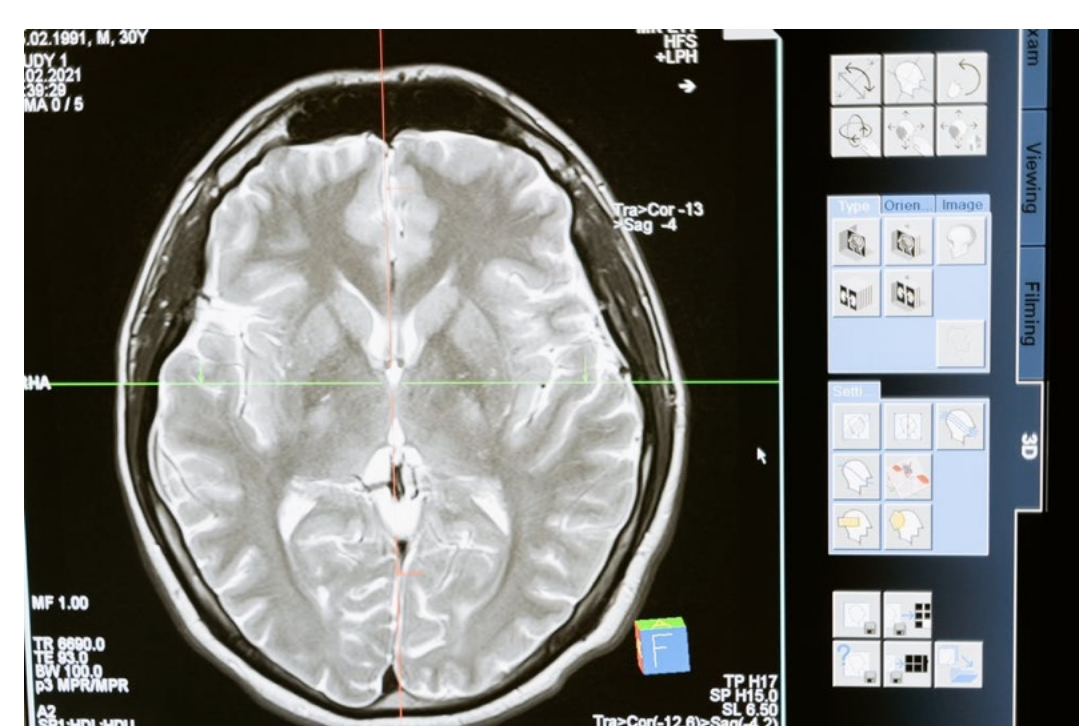

This week we learn about a "Hotspot" in the brain that researchers say impacts aging and about a new NIH funded research clinical trial for an anti-aging drug in dogs. We also learn about a cellular "Mortality timer" that could delay aging, and get a look at Brown University's Center on the Biology of Aging.

Are you part of a health or life extension research organization? Our coalition has grown to over 90 member groups, including 25 major US organizations and 16 major international groups. We hope your organization will be next! Check below to find a link to join our coalition quickly and easily.

All this and more this week. Join us as we move forward into another exciting month of incredible opportunities in this burgeoning and revolutionary field.
