Hello,

This week we learn about a new study using engineered mice with human like telomeres to study aging, how different tissues affect aging measurements, and how a molecule plays a role in creating energy for the body—and could lead to anti-aging therapies. We also learn about Dr. Eric Verdin, CEO of the Buck Institute for Research on Aging and the supplements he uses every day.

Are you part of a health or life extension research organization? Our coalition has grown to over 90 member groups, including 25 major US organizations and 16 major international groups. We hope your organization will be next! Check below to find a link to join our coalition quickly and easily.

All this and more this week. Join us as we move forward into another exciting month of incredible opportunities in this burgeoning and revolutionary field.

Edwina Rogers, CEO
