[View this email in your browser](#)

Hello,

This week we learn how blocking an amino acid may increase lifespans, how low cholesterol has been linked to reduced risk for dementia and how living in high heat environments can age us faster. We also learn about certain anti-aging compounds that may one day be used to treat Alzheimer's.

Are you part of a health or life extension research organization? Our coalition has grown to over 90 member groups, including 25 major US organizations and 16 major international groups. We hope your organization will be next! Check below to find a link to join our coalition quickly and easily.

All this and more this week. Join us as we move forward into another exciting month of incredible opportunities in this burgeoning and revolutionary field.
